                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 4
S05603
major merozoite surface antigen precursor - malaria parasite (Plasmodium falciparum) (st
N.Alternate names: gp195 surface antigen
C:Species: Plasmodium falciparum
C:Species: Plasmodium falciparum
C:Date: 12-Feb-1993 #sequence_revision 12-Feb-1993 #text_change 09-Jun-2000
R:Wyler, P.J.
Submitted to the EMBL Data Library, April 1989
A:Reference number: S05603
A:Rocession: S05603

major merozoite surface antigen precursor - Plasmodium chabaudi chabaudi cispecies: Plasmodium chabaudi chabaudi cispecies: Plasmodium chabaudi chabaudi cispecies: Plasmodium chabaudi di chacession: A4546

R.Deleersnijder, W.; Hendrix, D.; Bendahman, N.; Hanegreefs, J.; Brijs, L.; Hamers-Ca A; Cochem. Parasitol. 43, 231-44, 1990

A; Title: Molecular cloning and sequence analysis of the gene encoding the major meroz A; Reference number: A4556

A; Accession: A4556

A; Status: preliminary

A; Molecule type: mRNA

A; Rossidues: 1-1786 CDEL>

A; Rossidues: 1-1786 CDEL>

A; Cossidues: Caperfamily: major merozoite surface antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          merozoite surface antigen 1 precursor - Plasmodium vivax
Cippecies: Plasmodium vivax

Molecular genetics of kinesin light chains: generation of isoforms
by alternative splicing.".
1- FUNCTION: KINESIN IS A MICROTUBULE-ASSOCIATED FORCE-PRODUCING
PROTEIN THAT MAY PLAY A ROLE IN ORGANELE TRANSPORT. THE LIGHT
CHAIN MAY FUNCTION IN COUPLING OF CARGO TO THE HEAVY CHAIN OR IN
THE MODULATION OF ITS ATPASE ACTIVITY.
1- SUBUNIT: OLICOMERIC COMPLEX COMPOSED OF TWO HEAVY CHAINS AND

merozoite surface protein-1 (MSP-1) of the asexual blood stage of Plasmodium falciparum. It is used in the construction of recombinant protein CDC/NIIMALVAC-1, which is a multivalent, multistage malarial vaccine. The recombinant protein comprises, melittin signal peptide, (His)6 tag, T-cell epitope from tetanus toxoid and 21 antigenic epitopes from circumsporozoite protein (CSP), sporozoite surface protein-2 (SSP-2), liver stage antigen-1 (LSA-1), merozoite surface protein-1 (MSP-1), MSP-2, apical membrane antigen-1 (AMA-1), erythrocyte binding antigen-175 (EBA-175), rhoptry associated protein-1 (RAP-1) and gamete specific antigen, Pfg77. These epitopes were obtained at different stages of the life cycle of P. falciparum. CDC/NIIMALVAC-1 vaccine has antiparasitic activity and can used for treatment and prevention of malarial infections. Anti-CDC/NIIMALVAC-1 antibodies can be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Allelic variants of epidermal growth factor 1- or 2-like domains - of merozoite surface protein 1, produced recombinantly for malaria vaccines

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Uthaipibull C;
                     The sequence is that of an allelic variant of a merozoite surface protein-1 epidermal growth factor (EGF) 2-like domain. It may be used alone or as part of a fusion protein of EGF-1-like and EGF-2-like domains in vaccines against malaria. When expressed recombinantly it is produced in a form indistinguishable from that in the native protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel variants of the C-terminal fragment of Plasmodium merozoite

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This is the amino acid sequence of a recombinant protein comprising amino acids 1613-1705 of the Plasmodium falciparum merozoite surface protein 1 (MSPI) 19 KD C-terminal fragment (p19), linked to a glycosylphosphatidylinositol membrane anchoring sequence. p19 is the C-terminal fragment of the 42 kD MSPI from Plasmodium species. The recombinant protein can be used for the production of anti-malarial vaccines, where the p19 fragment provides a high level of protective immunity since it includes epitopes not presented in the p42 fragment.
                                                                                                                                                                                                             /note= "amino acids derived from P. falciparum MSP1 p19

The non-natural variants have reduced affinity for at least 1 antibody capable of blocking a second antibody that inhibits the proteclytic cleavage of Plasmodium MSP-1_4_2, and has the same affinity for at least one third antibody that inhibits the proteclytic cleavage of Plasmodium MSP-1_4_2, and has the same affinity for at least MSP-1_4_2, compared to natural MSP-1_1_9. The non-natural variants of the present invention are useful for immunising a mammal against malaria, and can be used to treat malaria. The present sequence is MSP-119 protein.

This is the amino acid sequence of a chimeric protein comprising amino acids 1-32 of the Plasmodium vivax merozoite surface protein 1 (MSP1) linked to amino acids Asn1613-Ser1705 which correspond to the 19 kD c-terminal fragment (P19) of MSP-1 from Plasmodium falciparum. P19 is the C-terminal fragment of the 42 kD MSP1 from Plasmodium species. The recomblant protein can be used for the production of anti-malarial vaccines, where the p19 fragment provides a high level of protective immunity since it includes epitopes not presented in the P42 fragment.
                                                                                      33..34 /note= "encoded by restriction enzyme sequence used to create the chimeric sequence"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Recombinant protein containing Plasmodium merozoite surface protein-1 p42 fragment – useful in antimalarial vaccines, also new antibodies for diagnosis and protein purification
                                                                                                                                      35..127 // Anote= "derived from P. falciparum C-terminal p19 fragment of MSP1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chimeric; Plasmodium vivax; merozoite surface protein; MSP1; p19; Plasmodium falciparum; malaria; vaccine; immunity; epitope.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This is the amino acid sequence of a recombinant protein comprising amino acids 1613-1705 of the Plasmodium falciparum merozoite surface protein 1 (MSP1) 19 KD C-terminal fragment (p19), linked to a glycosylphosphatidylinositol membrane anchoring sequence. p19 is the C-terminal fragment of the 42 kD MSP1 from Plasmodium species. The recombinant protein can be used for the production of anti-malarial vaccines, where the p19 fragment provides a high lavel of protective immunity since it includes epitopes not presented in the p42 fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                          This is the amino acid sequence of a chimeric protein comprising amino acids 1-32 of the Plasmodium vivax merozoite surface protein 1 (MSP1) linked to amino acids Asn1613-Ser1705 which correspond to the 19 KD C-terminal fragment (pl9) of MSP-1 from Plasmodium falciparum. pl9 is the C-terminal fragment of the 42 kD MSP1 from Plasmodium species. The recombinant protein can be used for the production of anti-malarial vaccines, where the pl9 fragment provides a high level of protective immunity since it includes epitopes not presented in the p42 fragment.

The present sequence is that of recombinant protein CDC/NIIMALVAC-1, which is a multivalent, multistage malarial vaccine. The recombinant protein comprises, melittin signal peptide, (His) 6 tag. T-cell epitope from tetanus toxoid and 21 antigenic epitopes from circumsporozoite protein (CSP), sporozoite surface protein-2 (SSP-2), liver stage antigen-1 (LSA-1), merozoite surface protein-1 (MSP-1), MSP-2, apical membrane antigen-1 (AMA-1), erythrocyte binding antigen-175 (EBA-175), rhoptry associated protein-1 (RAP-1) and gamete specific antigen, Pfg27. These epitopes were obtained at different stages of the life cycle of Plasmodium falciparum. CDC/NIIMALVAC-1 vaccine has antiparasitic activity and can used for treatment and prevention of malarial infections. Anti-CDC/NIIMALVAC-1 antibodies can be used for detecting P. falciparum in biological samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ó
                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a 42 kDa C-terminal portion of malaria merozoite surface protein MSP-1 (i.e. MSP-1-42), an important target for the development of a vaccine against plasmodium falciparum. The nucleic acid sequence encoding MSP-1-42 has been modified (see AAX56008) compared to the native sequence (see AAX56009) such that 306 nucleotide positions have been replaced to lower the AT content (from 76 to 49.7%) and to eliminate 10 mRNA instability motifs while maintaining the same protein amino acid sequence. These alterations allow MSP-1-42 to be expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequence. These alterations allow MSP-1-42 to be expressed in mammallan cell culture and in transgenic mice. Native MSP-1-12 is known to be difficult to express in cell culture systems, mammalian cell culture systems or in transgenic animals. The invention allows expression of MSP-1 protein in the milk of transgenic animals, and also provides a DNA vaccine comprising a vector containing the altered MSP-1-42 sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0;

The present sequence represents a 42 kDa C-terminal portion of malaria merozoite surface protein MSP-1 (i.e. MSP-1-42), an important target for the development of a vaccine against plasmodium falciparum. The nucleic acid sequence encoding MSP-1-42 has been modified (see AAX2586) compared to the native sequence (see AAX2587) such that 306 nucleotide positions have been replaced to lower the AT content (from 76 to 49.7%) and to eliminate 10 mRNA instability motifs while maintaining the same protein amino acid sequence. These alterations allow MSP-1-42 to be expressed in mammalian cell culture and in transgenic mice. The invention provides modified recombinant nucleic acid sequences and methods for
                                                                                                                                                                                                                                                                                                                                                                                                                                  New modified recombinant nucleic acid sequences useful for producing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              motifs or rare codons relative to the recombinant expression system to be used. The invention allows expression of MSP-1 protein in the milk of transgenic animals, and also provides a DNA vaccine comprising a vector containing the altered MSP-1-42 sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                increasing the mRNA levels and protein expression of proteins that are difficult to express in cell culture systems, mammalian cell culture systems or in transgenic animals. The preferred difficult
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              organisms such as parasites, bacteria and viruses that have DNA coding sequences of high AT content or which have mRNA instability
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein candidates for expression are those derived from lower

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New modified recombinant nucleic acid sequences useful for producing
                                                                                                                                       This present sequence comprises a 42 kDa C-terminal portion of malaria merozoite surface protein MSP-1 (i.e. MSP-1-42), an important target for the development of a vaccine against Plasmodium falciparum. The C-terminal end of the sequence is modified to include a 6xHis tag. A nucleic acid (see AAX56008) encoding MSP-1-42 has been modified according to a method of the invention in order to improve expression in mammalian cells and in transgenic animals by reducing the AT content and removing mRNA instability moutls. The invention allows expression of MSP-1-42 in the milk of transgenic animals, and also provides a DNA vaccine comprising a vector containing the altered MSP-1-42 nucleic
                                                                                                                                                                                                                                                                                                                     ö

This present sequence comprises a 42 kDa C-terminal portion of malaria merozoite surface protein MSP-1 (i.e. MSP-1-42), an important target for the development of a vaccine against plasmodium falciparum. The C-terminal end of the sequence is modified to include a 6xHis tag. Nucleic acids (see AAX2556 and AAX2559) encoding MSP-1-42 have been modified according to a method of the invention in order to improve expression in mammalian cells and in transgenic animals. The invention provides modified a method of the invention protein expression of proteins that are difficult recombinant nucleic acid sequences and methods for increasing the minka levels and protein expression of proteins that are difficult to express in cell culture systems, especially mammalian cells culture systems or in transgenic animals. The preferred difficult protein candidates for expression are those derived from lower corporaisms such as parasites, bacteria and viruses that have DNA coding sequences of high AT content or which have mRNA instability motifs or rare codons relative to the recombinant expression system to be used. The invention allows expression of MSP-1 in the milk vector containing the altered MSP-1-42 nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /note= "Asn in native MSP-1-42 (N181Q mutation)" 278\,

                                                                                                                                                                                                                                 The present sequence represents a 42 kDa C-terminal portion of malazia merozoite surface protein MSP-1 (i.e. MSP-1-42), an important target for the development of a vaccine against Plasmodium falciparum. The sequence has been modified to include an N-terminal beta-casein signal peptide and an N-terminal 6xHis tag. In addition, N181Q and N782Q mutations have been introduced to eliminate 2 N-glycosylation sites. These modifications allow the MSP-1-42 protein to be expressed in the milk of transgenic mice.

                                                                                                                                                                      The present sequence represents a 42 kDa C-terminal portion of malaria merozoite surface protein MSP-1 (i.e. MSP-1-42), an important target for the development of a vaccine against plasmodium falciparum. The sequence has been modified to include an N-terminal beta-casein signal peptide and an N-terminal 6xHis tag. In addition, NN81Q and N262Q mutations have been introduced to eliminate 2 N-glycosylation sites. These modifications allow the MSP-1-42 protein to be expressed in the milk of transgenic mice. The invention generally relates to modified recombinant nucleic acid sequences and methods for increasing the mRNA levels and protein expression of proteins that are difficult to express in cell culture systems, mammalian cell culture systems or in transgenic animals. The preferred difficult protein candidates for transgenic animals. The preferred difficult protein candidates for expression are those derived from lower organisms such as parasites, bacteria and viruses that have DNA coding sequences of high AT content or which have mRNA instability motifs or rare codons relative to the recombinant expression system to be used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 153

Sequence 189, Application US/0875587
Patent No. 604597
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Wooster, Richard F
APPLICANT: Wooster, Richard F
APPLICANT: Stratton, Michael R
TITLE OF INVENTION: Materials and methods relating to the
TITLE OF INVENTION: identification and sequencing of the BRCA2 cancer:
TITLE OF INVENTION: susceptibility gene and uses thereof.
NUMBER OF SEQUENCES: 222
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CORRESPONDENCE ADDRESS:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Molecule type: DNA
A; Residues: 1-1631 <MAC>
A; Residues: 1-1631 <MAC>
C; Comment: The merozoite stages of different strains have strain-specific surface
C; Comment: P. falciparum has three stages: sporozoite, merozoite, and gametocyte.
C; Superfamily: major merozoite surface antigen tandem repeat; transmembrane
C; Keywords: glycoprotein; merozoite; surface antigen; tandem repeat; transmembrane
F;1-19/Domain: signal sequence #status predicted <SIG>
